(a) A_1 vs total stellar mass ($N = 246$)
$N = 246$
$r_P = -0.383$ ($p = 5.2e-10$)
$\rho_S = -0.395$
median $\pm 1\sigma$ ($N \geq 5$)
A_1
$\log(M_\star/M_\odot)$
(b) Stellar mass distribution in stellar-mass subsample
median = 10.23
Range: [8.28, 11.30]
Mean = 10.16
Std = 0.52
Number of galaxies
$\log(M_\star/M_\odot)$
